

Project Executable Files

Date	10 july 2026
Team ID	xxxxxx
Project Name	Emotion Detection & Learning Support Engine
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	yes
3	requirements.txt / package.json / dependency file	yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	YES
6	Deployed application URL (if hosted)	YES
7	APK / Executable binary (if applicable for mobile/desktop apps)	YES
8	Dockerfile / Containerization config (if applicable)	NO
9	Test files and test results	YES

10	Demo video or walkthrough (if required)	YES
----	---	-----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

Emotion-Detection-Learning-Support-Engine/

```
|— src/
|   |— bert_classifier.py
|   |— bilstm_classifier.py
|   |— preprocessing.py
|   |— response_templates.py
|   |— csv_logger.py
|   |— prediction_schema.py
|   |— mixed_emotion.py
|   └— test files
|
|— templates/
|   └— index.html
|
|— static/
|
|— app.py
|— requirements.txt
|— README.md
|— tokenizer.json
|— tokenizer_config.json
|— label_mapping.json
|— config.json
|— model.safetensors
|— bilstm_emotion.keras
|— prediction_history.csv
|— emotion_response_examples.csv
|— render.yaml
|— .gitignore
|— .gitattributes
```

Step 3: Deployment / Access Details

Field	Details
-------	---------

Hosted / Deployed URL	
Login Credentials (Demo)	[Provide demo username and password for evaluator access]
Platform / Hosting Provider	[e.g., Render, Vercel, AWS, Heroku, Azure]
Repository Link	https://github.com/sahasraanumolu-cyber/Emotion-Detection-Learning-Support-Engine
Demo Video Link	Demo video.mp4

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

RUN INSTRUCTIONS

Emotion Detection & Learning Support Engine

	STEP 1 Clone the Repository	Clone the GitHub repository to your local machine. <pre style="background-color: #333; color: #00ff00; padding: 5px;">git clone https://github.com/sahasraanumolu-cyber/Emotion-Detection-Learning-Support-Engine.git</pre>
	STEP 2 Navigate to Project Directory	Go to the project folder. <pre style="background-color: #333; color: #00ff00; padding: 5px;">cd Emotion-Detection-Learning-Support-Engine</pre>
	STEP 3 Install Dependencies	Install all required dependencies using pip. <pre style="background-color: #333; color: #00ff00; padding: 5px;">pip install -r requirements.txt</pre>
	STEP 4 Configure Environment	Create a <code>.env</code> file in the root directory and add your Gemini API key. (Get your API key from Google AI Studio) GEMINI_API_KEY=your_gemini_api_key_here
	STEP 5 Run the Application	Start the Flask application. <pre style="background-color: #333; color: #00ff00; padding: 5px;">python app.py</pre>
	STEP 6 Open in Browser	Open your web browser and visit the following URL. http://127.0.0.1:5000

Application is Ready!
 You can now enter text, detect emotions, and get AI-powered learning recommendations.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
------	--------------------------	---------------------

1	First prediction may take longer due to model loading	Model loads once during application startup
2	Model loads once during application startup	Ensure stable internet connection
3	Currently supports text-based emotion detection only	Voice and image emotion detection planned for future versions
